Welcome to the Oregon Injury Prevention Dashboard

Oregon's Injury and Violence Prevention Program uses data to understand when and why violence, unintended injuries, and death occur.

This dashboard contains data for the following injury types:

- All Injury (includes all injury categories)
- Assault
- Drowning
- Drug Overdose
- Falls
- Fall-Related Hip Fracture (65 years or greater)
- Fire
- Firearm
- Motor Vehicle Transportation
- Poisoning
- Suicide
- Traumatic Brain Injury

This information can be used along with community input to develop prevention efforts and comes from the following sources:

- Administrative Discharge Data for hospital and emergency department visits from the [Hospital Association of Oregon](#)
- Death and morbidity data from the [Oregon Center for Health Statistics](#). Note: Definitions and terms may vary

Dashboard Version Log

A summary of the dashboard updates can be found below:

02/20/2025 (Version 1.5)

Data Update. The finalized 2023 data has been added and all 4-year averages for county and demographic data have been updated to 2020-2023. All rates data has been revised to align with the U.S. Census Bureau's Population Estimates. Additionally, new ICD-10-CM coding for suicide and motorvehicle transport has been implemented for hospital and emergency department data for 2022 forward.

04/30/2024 (Version 1.4)

Bug Fix and Content Update. Removed *By Age Group* plot in Demographics tab due to an issue in the rates calculation leading to incorrect data being displayed. The *By Age Group and Sex* plot is correct and provides greater detail than the removed plot. The *By Age Group and Sex* plot will remain on the dashboard. If you want analysis by age group alone, please contact us and we can provide this information.

All Injury

Fatal Injury Count in Oregon

Injury Type: All Injury

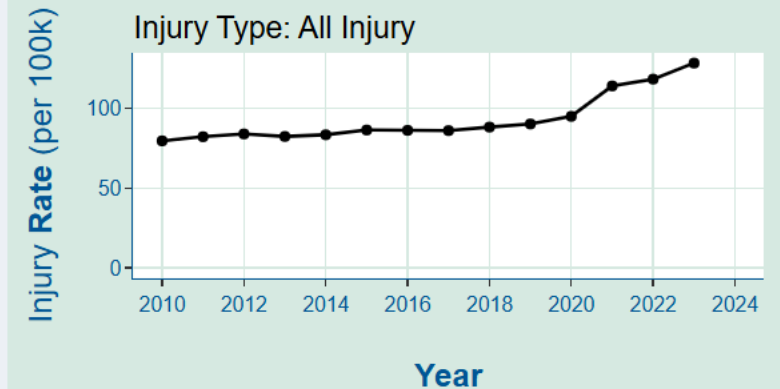

Counts represent the number of injuries for Oregon residents.

Data Source: Oregon Center for Health Statistics

Fatal Injury Rate in Oregon

Injury Type: All Injury

Rates are calculated per 100,000 Oregon residents.

Data Source: Oregon Center for Health Statistics

Additional Notes:

- Values are based on Oregon residents that died in Oregon. Values do not include people who did not live in Oregon but died while in the state.
- A crude rate is defined as the total number of events (counts) divided by the total population of the selected geography, demographic, or community (per 100,000 people). The rates provided on this dashboard are crude rates.
- To protect individuals' privacy, data are not shown whenever the counts fall below certain thresholds. Please see Technical Notes for more details.
- If you want to see additional data or learn more about the counts/rates presented, please [contact us](#) and we will work with you to provide the needed information.

Monthly Overdose Trends in Oregon (Last Updated: May 01, 2025)

Select your criteria and see the updated trends in the graphs and tables below.

Select drug type:

- ☒ All Overdose
☐ Opioid
☐ Stimulant

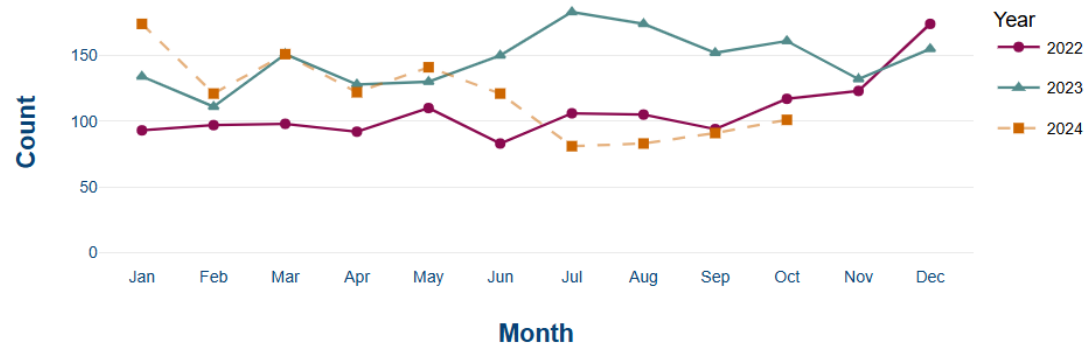

Select years of interest:

- ☒ 2024 ☐ 2021
☒ 2023 ☐ 2020
☒ 2022

Count Cumulative Count

Monthly Overdose Deaths in Oregon

Drug Type: All Overdose

Note: Preliminary data (dashed line) are subject to change when finalized.

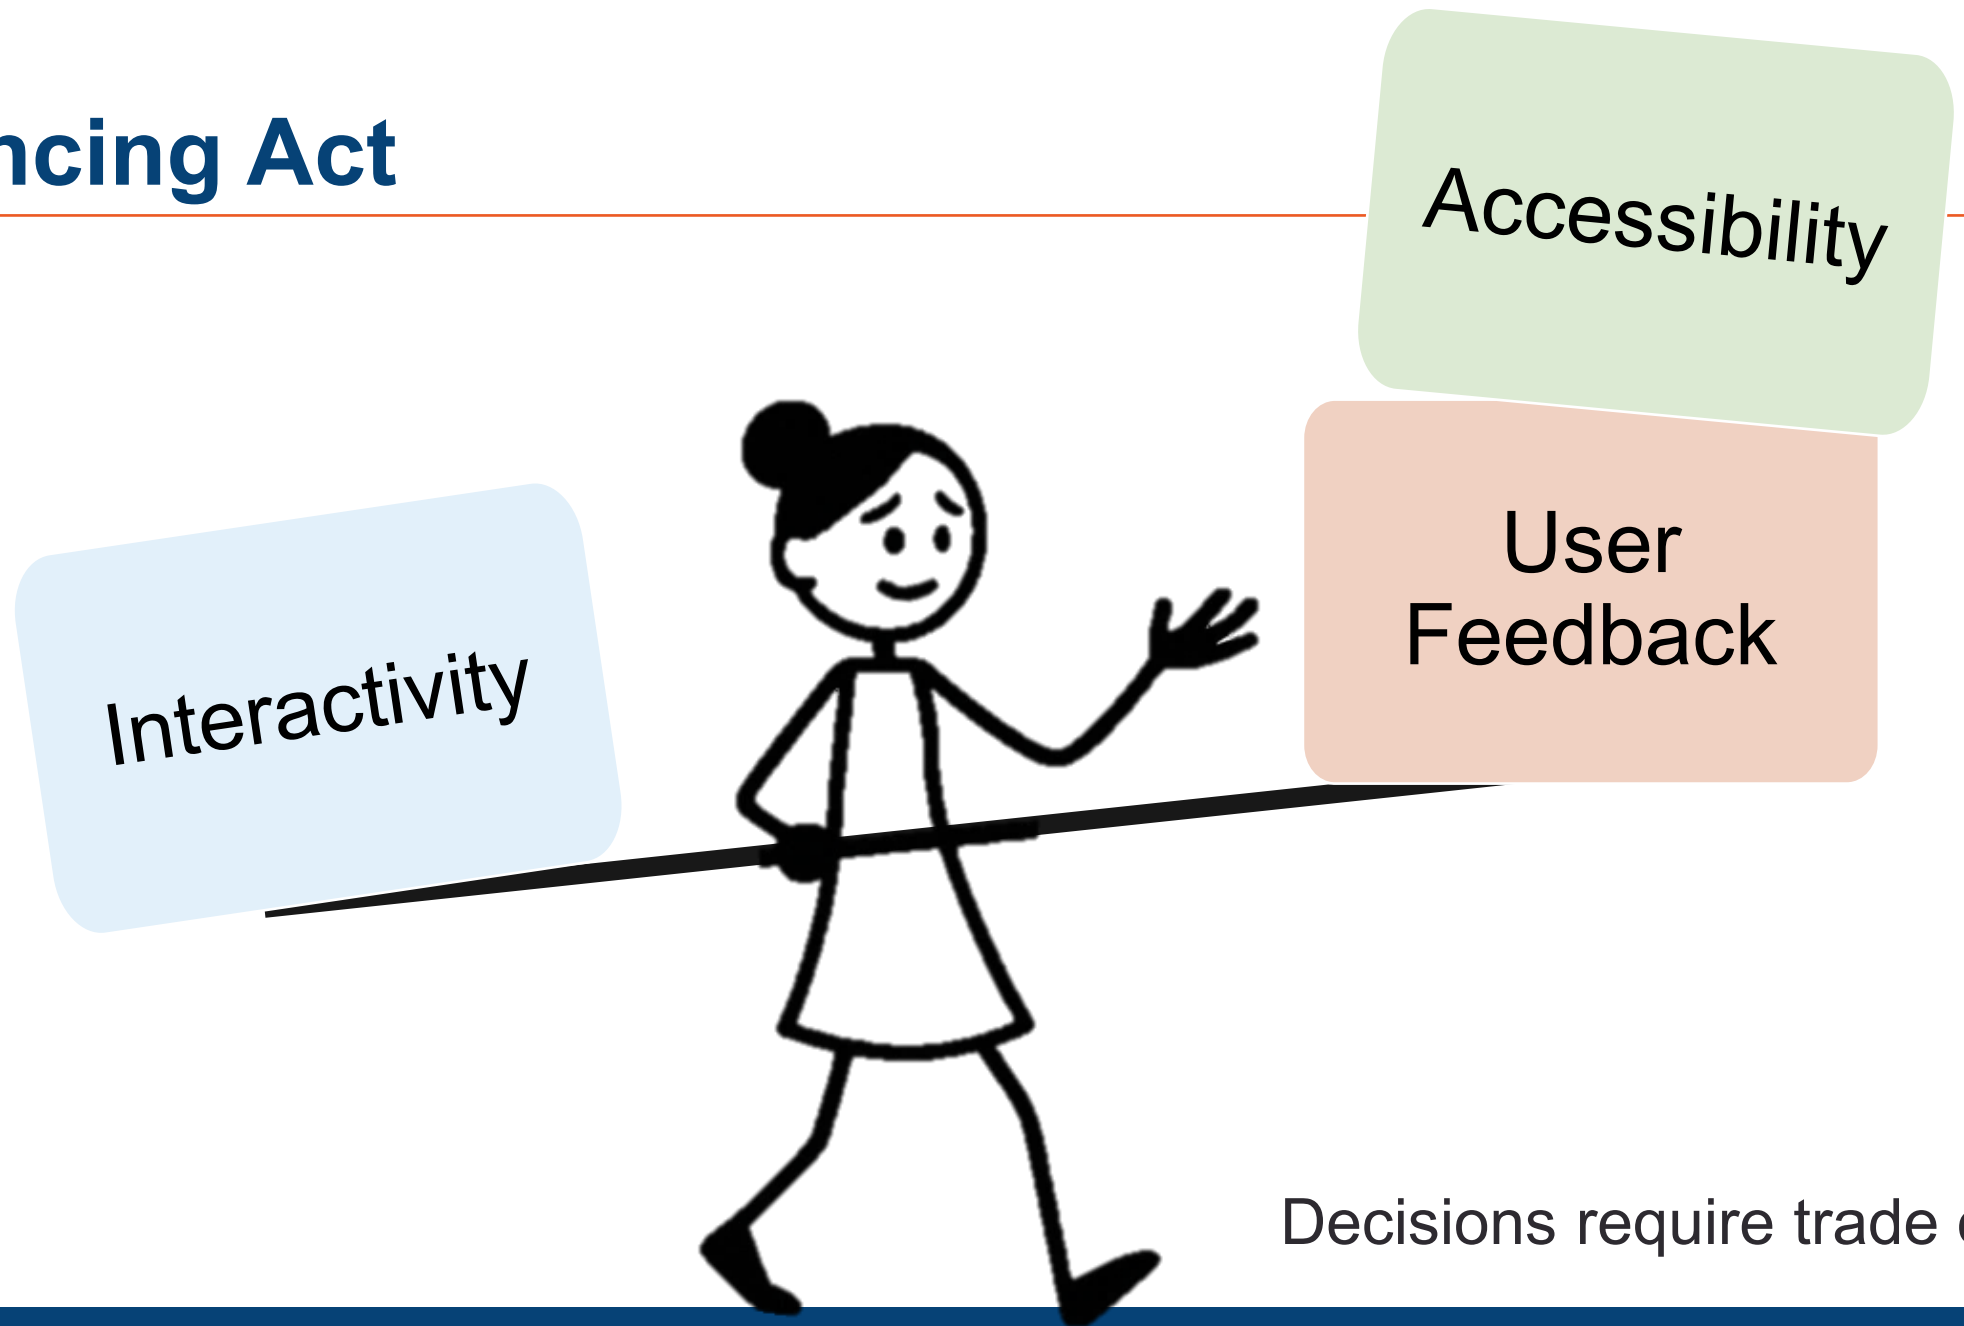

Data Source: State Unintentional Drug Overdose Reporting System (SUDORS)

Additional Notes:

- Categories are not mutually exclusive. Deaths involving multiple drugs are included in the counts for each drug.
- **Opioid** includes deaths that had at least one opioid listed as a cause of death, including illegally-made fentanyl, heroin, prescription opioids, and any other opioids involved in overdose deaths.
- **Stimulant** includes deaths that had at least one stimulant listed as a cause of death, including cocaine, methamphetamine, and any other stimulants involved in overdose deaths.
- Preliminary SUDORS data (represented by dashed line) represent information that has not undergone the same quality control measures as the finalized data.

Dashboard Version Log

A summary of the dashboard updates can be found below:

02/20/2025 (Version 1.5)

Data Update. The finalized 2023 data has been added and all 4-year averages for county and demographic data have been updated to 2020-2023. All rates data has been revised to align with the U.S. Census Bureau's Population Estimates. Additionally, new ICD-10-CM coding for suicide and motorcycle transport has been implemented for hospital and emergency department data for 2022 forward.

04/30/2024 (Version 1.4)

Bug Fix and Content Update. Removed By Age Group plot in Demographics tab due to an issue in the rates calculation leading to incorrect data being displayed. The By Age Group and Sex plot is correct and provides greater detail than the removed plot. The By Age Group and Sex plot will remain on the dashboard. If you want analysis by age group alone, please contact us and we can provide this information.

04/12/2024 (Version 1.3)

DATA UPDATE! Finalized 2022 data was added and 4-year averages were updated to 2019-2022 for county and demographic data. New ICD-10CM coding was added updating the Falls category for hospital data. Additionally, for the race category for deaths when more than one race is reported, the count will be based on the least common race. This is sometimes called the rarest race methodology. Least common

```
output$plot <- renderPlot({  
  ggplot(data, aes(x=year, y=rate)) +  
    geom_point() +  
    geom_line()  
})
```

After (interactive)

```
output$plot <- renderPlotly({  
  p <- ggplot(data, aes(x=year, y=rate,  
    text = paste0("Annual...", dataType))) +  
    geom_point() +  
    geom_line()  
  
  ggplotly(p, tooltip = "text")  
})  
  
# add data download  
output$download_data <- downloadHandler(  
  filename = function() {  
    paste0("data_", last_update_date, ".csv")  
  },  
  content = function(file) {  
    write.csv(data, file)  
  })
```

Balancing Act

Decisions require trade offs.

Key takeaways

- Start with accessibility
 - Readable fonts, high contrast, clear navigation
- Make it interactive
 - Let users explore and export
- Gather and act on feedback
 - Internal and external

Good dashboards don't just show data. They guide decisions.

Accessibility

The diagram consists of three rounded rectangular boxes arranged in a triangular pattern. A light green box labeled 'Accessibility' is at the top. Below it, to the left, is a light blue box labeled 'Interactivity'. To the right of the 'Interactivity' box is a light orange box labeled 'User Feedback'. The boxes are positioned such that they appear to be interconnected or foundational to the overall dashboard design.
